

Product Bulletin #: 1092
Model: 86AR/RS1035
Topic: Intermodal Dump Valve
Effective Date: September 28, 1998

Reyco Granning is proud to announce the development of an intermodal dump valve option, part # 24337-01, for the 86AR/RS1035 model.

This valve solves the problem of placing a trailer on a rail car and having the anti-dock walk geometry hold the trailer at maximum suspension height with the air springs and shock absorbers fully extended.

When the trailer is ready to be lifted onto a rail car, a button on the valve is pressed, which releases the rear brakes only, dumping air out of all air springs. Then when the trailer is placed on the rail car, the suspension will lower to its minimum height until the internal air spring bump stops.

We are confident you will be pleased with these improvements. Please call your Reyco Granning Customer Service Representative for any additional questions.
